SUMMARY

Senior React Native Developer with 5+ years building and shipping cross-platform iOS and Android apps using React Native, Swift, and Kotlin. Experience spans offline-first POS, telehealth, logistics, HRMS, and IoT products, with App Store and Google Play releases, native-module integration, and Agile/Scrum delivery in remote teams.

EXPERIENCE

Senior Software Engineer, *TEKHQS* 03/2025 – Present | Lahore

- Dveloped MyDriverBook as a React Native driver-tracking and ELD compliance app for 20+ fleet clients and 250+ trucks, using Turbo Modules to bridge Swift/Kotlin SDKs for real-time monitoring and HOS compliance.
- Extended MyDriverBook to support a SIM-enabled Jimi IoT ELD device alongside the legacy integration, adding direct-to-server data transfer and automatic device fetch to remove the manual scan-and-connect step, using third-party SDKs and RESTful APIs.
- Engineered Komiti as a Web3 group savings and crypto payout MVP with MetaMask and smart contract integration, implemented universal deep linking, upgraded to Android API 36, and released to Google Play and the App Store.
- Developed Intellithrive as a voice-enabled AI agent MVP, building a Node.js/Express backend that streams STT/TTS chunks over custom WebSockets to keep agent response latency low.
- Built Crootive as an HRMS mobile app for 10+ clients across Pakistan and Qatar, implementing universal deep linking, conducting code reviews, and mentoring a junior React Native developer.
- Developed Wellness Checker as a cross-platform React Native MVP for wellness tracking and health assessments, working with product and design teams to turn wireframes into functional screens.
- Owned the mobile and native bridging layer (Swift/Kotlin) in a 12-member Agile/Scrum team, implementing Zustand for state management, biometric authentication, and REST/Firebase integration for real-time data sync.
- Contributed to CI/CD pipelines and release processes using EAS, publishing to the App Store and Google Play while maintaining performance and code quality.

Software Engineer, *Techverx* 12/2020 – 03/2025 | Lahore

- Built Friday POS as an offline-first React Native POS app that stayed operational during connectivity loss through LAN-based server sync, and implemented split billing for dine-in workflows in a 5-member team.
- Developed Quure as a HIPAA-compliant telehealth/EMR platform from architecture to production as the sole mobile engineer in a 14-member team, using test-driven development (unit and integration tests) and code reviews to write clean, testable code.
- Integrated RESTful APIs and third-party services, including Twilio for WebRTC video consultations, plus push notifications and universal deep linking for appointments, prescriptions, and chat.
- Identified and resolved performance bottlenecks, cutting app startup time from ~4s to ~2s by removing simultaneous API calls on the landing screen, and added skeleton loading across multiple screens to improve perceived performance.
- Developed The Pusic as a cross-platform music streaming app for a Saudi Arabia-based client, implementing background playback control that pauses and resumes streaming with a 15-minute buffer around local prayer times in a 5-member team.
- Delivered additional React Native apps for international clients, including Elevate PRO5+, VPIX Motor Street 36, and BTF (field service dispatch app for an Italian client), working in Agile, cross-time-zone teams and publishing to the App Store and Google Play.

EDUCATION

M.Sc Computer Science, *Punjab University College of Information Technology, Lahore* 10/2018 – 08/2020 | Lahore

Courses:

Object Oriented Programming | Data Structure and Algorithms | Database
Project Management | Artificial Intelligence | Networking

SKILLS

React Native | Expo | React.js | JavaScript | TypeScript | Redux | Zustand | Turbo Modules | Push Notifications | In-App Purchases | Stripe | Firebase | Socket.io | WebRTC | Deep Linking | Redux-Saga/Toolkit | SQLite | TanStack Query | Git | Twilio | REST APIs / GraphQL | Swift | Kotlin | Debugging | Problem-Solving

CORE PROJECTS

MyDriverBook, *Driver Tracking & ELD Integration*

- Engineered MyDriverBook, a cross-platform React Native ELD compliance and driver-tracking app deployed across 20+ commercial fleets and 250+ active trucks on iOS and Android.
- Bridged native Swift and Kotlin SDKs using React Native Turbo Modules, enabling high-throughput driver activity tracking, FMCSA/HOS compliance monitoring, and real-time telemetry.
- Architected integration for a SIM-enabled Jimi IoT ELD hardware suite alongside legacy devices, implementing direct server sync and device auto-fetch to eliminate manual pairing workflows and improve field connection reliability.
- Owned native platform layers, Zustand state architecture, biometric authentication, and EAS-driven CI/CD pipelines within a 12-member cross-functional engineering team.

Quure, *Telehealth & EMR Platform*

- Designed and developed a comprehensive telehealth/telemedicine application with full EMR (Electronic Medical Records) functionality, enabling physicians and patients to consult remotely without visiting a hospital or clinic, with HIPAA-compliant handling of patient data throughout.
- Implemented real-time chat using Socket.IO with support for text and file attachments (images, documents, reports), plus Twilio-powered video consultation modules for secure, live virtual appointments.
- Built a vitals capture module (weight, blood pressure, heart rate, temperature, etc.) where providers photograph a reading via the in-app camera and an OCR backend identifies the vital type and extracts the value automatically.
- Implemented push notifications and reminders for appointments, prescriptions, chat messages, and consultation updates, keeping physicians and patients informed in real time.

Intellithrive Voice Agent

- Developed a cross-platform React Native voice-enabled AI agent application with secure authentication and customizable agent creation based on selected categories and skill sets.
- Integrated real-time Speech-to-Text and Text-to-Speech capabilities using WebSocket communication, enabling low-latency conversational interactions between users and AI agents across Android and iOS platforms.

Wellness Checker

- Designed and developed a cross-platform React Native application for user wellness tracking, building interactive assessment flows that let users record wellness data and monitor their health status over time.
- Integrated backend APIs for secure data submission, retrieval, and synchronization, ensuring reliable performance across the app.
- Collaborated with cross-functional teams to deliver a responsive, user-friendly interface optimized for Android/iOS.

Komiti

- Built Komiti, a decentralized group-savings and automated payout application for iOS and Android, integrating MetaMask wallet connectivity and smart-contract execution pipelines.
- Modernized the core React Native/Expo toolchain to target Android API level compliance, owning release governance across Google Play Console and Apple App Store Connect.

Friday POS, *Point of Sale System*

- Built a versatile Point-of-Sale system using React Native for both Android and iOS, tailored for Fine Dining and Takeaway operations with efficient order management and a user-friendly interface.
- Engineered a fully offline mode using SQLite that connects to the parent server via LAN address, ensuring uninterrupted POS operations even without internet connectivity.
- Implemented seamless online-offline data synchronization, automatically syncing orders, inventory, and transactions once the connection to the parent system is restored.
- Streamlined order processing workflows for fast food businesses, delivering smooth customer experiences across dine-in and takeaway services.
