SUMMARY

Senior React Native Developer with 5+ years shipping production mobile apps across fintech, telehealth, logistics, HRMS, and IoT for clients in Pakistan, the Middle East, and Europe. Deep expertise in native Turbo Modules/JSI bridging, offline-first architecture, and real-time systems.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, TEKHQS  03/2025 – Present | Lahore

- Developed MyDriverBook, a driver tracking and ELD compliance application deployed across 20+ fleet clients and 250+ trucks, bridging the native Jimi SDK (Android/iOS) into React Native via Turbo Modules for real-time driver activity monitoring and HOS compliance.
- Extended MyDriverBook to support a new SIM-enabled Jimi IoT ELD device alongside the existing legacy ELD integration, enabling direct-to-server data transfer and auto-fetch of assigned devices to eliminate the manual scan-and-connect step for drivers.
- Built Crootive, an HRMS mobile application used by 10+ clients across Pakistan and Qatar, leading a junior React Native developer within a 5-6 member team.
- Built Intellithrive, a voice-enabled AI agent MVP within a 4-5 member team, streaming webhook-based STT/TTS chunks in real time to cut agent response latency.
- Developed Wellness Checker, a cross-platform React Native MVP for user wellness tracking and health assessment workflows within a 4-5 member team.
- Updated Komiti, a group savings and crypto payout MVP with MetaMask wallet integration, also upgrading the app to target Android API Level 36 for continued Google Play Store compliance, and supported store deployment on both Play Store and App Store within an 8-member team.
- Owned the mobile and native bridging layer within a 12-member cross-functional MyDriverBook team, implementing Zustand for lightweight global state management, biometric authentication for secure financial-grade login, and REST/Firebase integration for real-time data sync.

Software Engineer, Techverx  12/2020 – 03/2025 | Lahore

- Built Friday POS, offline-first architecture, engineering the mobile app as a LAN-connected client to a master desktop server for uninterrupted order processing during connectivity loss, and developed split billing functionality (equal-split and per-seat split) for dine-in operations, within a 5-member team.
- Developed Quure, a telehealth/EMR platform, from initial architecture through production release as the sole mobile engineer within a 14-member cross-functional team (primarily backend and web).
- Integrated WebRTC for real-time video consultations between physicians and patients, supporting live provider-patient interactions across the platform.
- Reduced app startup time from ~4s to ~2s by eliminating simultaneous API calls on the landing screen, and replaced static loading icons with skeleton loading across multiple screens to reduce UI flicker and improve perceived performance.
- Developed The Pusic, a cross-platform music streaming app, from initial build through production release for a Saudi Arabia-based client, within a 5-member team, implementing automated background playback control that pauses and resumes streaming with a 15-minute buffer around local prayer times.
- Delivered additional cross-platform React Native applications for international clients, including Elevate PRO5+ (athlete training platform with live coaching and video subscriptions), VPIX Motor Street 36 (360° vehicle showcase with video-to-panorama processing), and BTF (field service dispatch and tracking app for an Italian client).

EDUCATION

M.Sc Computer Science, Punjab University College of Information Technology, Lahore 10/2018 – 08/2020 | Lahore

Courses:

Object Oriented Programming | Data Structure and Algorithms | Database
Project Management | Artificial Intelligence | Networking

SKILLS

React Native | Expo | React JS | Node JS | Javascript | Typescript | Redux | Zustand | ContextAPI | Push Notifications | In-App Purchases | Socket.io | Redux-Saga | React Query | SQLite | MongoDB | Git | WebRTC | Firebase | Turbo Modules | React Navigation | Deep Linking | REST APIs / GraphQL | Debugging | Problem-Solving

CORE PROJECTS

MyDriverBook, *Driver Tracking & ELD Integration*

- Developed a cross-platform React Native driver tracking application to monitor driver activity, trip data, and compliance workflows in real time.
- Integrated Jimi ELD devices to capture and process telematics data, enabling accurate driver and vehicle tracking.
- Bridged the native Jimi SDK for Android and iOS into the React Native application using Turbo Modules, ensuring seamless communication between native device functionality and the JavaScript layer.
- Built features supporting real-time tracking, driver logs, and operational visibility, improving fleet monitoring and compliance management.

Intellithrive Voice Agent

- Developed a cross-platform React Native voice-enabled AI agent application with secure authentication and customizable agent creation based on selected categories and skill sets.
- Integrated real-time Speech-to-Text and Text-to-Speech capabilities using WebSocket communication, enabling low-latency conversational interactions between users and AI agents across Android and iOS platforms.

Wellness Checker

- Design & developed a cross-platform React Native application focused on user wellness tracking and health check workflows.
- Built interactive assessment flows to help users record wellness-related information and monitor their health status over time.
- Integrated backend APIs for secure data submission, retrieval, and synchronization, ensuring a smooth and reliable user experience.
- Collaborated with cross-functional teams to deliver a responsive, user-friendly mobile interface optimized for both Android and iOS

Komiti

- Built group contribution features where users create/join saving circles and receive payouts on a weekly/monthly cycle.
- Integrated MetaMask crypto wallet for secure contributions and payouts using cryptocurrencies.
- Delivered a seamless React Native experience with real-time updates on group status, contributions, and payouts.

Friday POS, *Point of Sale System*

- Built a versatile Point-of-Sale system using React Native for both Android and iOS, tailored for Fine Dining and Takeaway operations with efficient order management and a user-friendly interface.
- Engineered a fully offline mode using SQLite that connects to the parent server via LAN address, ensuring uninterrupted POS operations even without internet connectivity.
- Implemented seamless online-offline data synchronization, automatically syncing orders, inventory, and transactions once the connection to the parent system is restored.
- Streamlined order processing workflows for fast food businesses, delivering smooth customer experiences across dine-in and takeaway services.

Quure, *Telehealth & EMR Platform*

- Designed & developed a comprehensive telehealth/telemedicine application with full EMR (Electronic Medical Records) functionality, enabling physicians and patients to consult remotely without visiting a hospital or clinic.
- Implemented real-time chat using socket.io, supporting both text messaging and multiple attachment types (images, documents, reports) for seamless physician-patient communication.
- Integrated video consultation modules, allowing secure, live virtual appointments between healthcare providers and patients.
- Configured Pusher Beams for targeted push notifications, ensuring timely alerts for appointments, prescriptions, chat messages, and consultation reminders.
